

MAXIMIZING TOOL LIFE IN ABRASIVE APPLICATIONS

Carbide lined dies and ceramic lined dies from Wilson Tool International are an ideal solution when working with abrasive formulas. The linings provide increased wear resistance and reduce friction in the application. The result is a die with optimal lasting power despite challenging conditions.

All Wilson Tool dies are designed and manufactured to the highest quality standards and tolerances.

Carbide Lined Dies

- Greatly increases die life
- Especially useful for abrasive formulas
- Increases wear resistance
- Adding taper relief can help with hard-to-compress formulas
- Available for rounds and shapes

Ceramic Lined Dies

- Reduces tablet marking
- Reduces heat and friction
- High wear resistance
- Adding taper relief can help with hard-to-compress formulas
- Available for rounds only

Helping Our Customers Succeed

A major nutraceutical company in the U.S. is extending the life of their dies 5X by using our carbide lined dies for calcium. They also use our ceramic lined dies to eliminate tablet marking on magnesium oxide.
